Grizzly Solid Waste Grapple

The versatile standard solid waste Grizzly grapple is complete with features and specifications suitable for those applications in which 5,000 lbs. downward force is required at the end of the 25 ft. stick (20,000 lbs. when stick is perpendicular with the ground.)

The Grizzly grapple includes the following:

1. Two 3 1/2" open and close grapple cylinders
2. 360-degree continuous rotation, using heavy duty Rotek 20" slew bearing (no spindle or roller bearings to wear out)
3. The head is customized to meet customer's stick linkage bolt pattern
4. 52" jaw opening to allow removal of large objects from the waste stream
5. Flat tamping surface when grapple is closed which allows a single attachment for grappling and compacting
6. All exposed hoses are guarded, guards over grapple cylinders
7. Grapple orbit motor can be removed without disassembling the grapple
8. Continuous rotation and stick linkage travel range allow precise movements, operator effectively has extended hand and wrist movement
9. Field-tested and proven, design evolution based on real transfer station experience since 1977
10. 2" grapple arm pins with long bushings for maximum pin life
11. Replaceable hardened bushings in grapple ears for extended pin/ear life
12. 3" grapple cylinder clevis for extended durability
13. Complete owner's manual
14. Same day service & parts availability
