Are your customers having difficulty “grappling” with their solid waste and/or debris handling problems? If the answer is yes, we have the solution for you! Why not introduce them to one of the most dependable, hard-working, and long-lasting attachments used in the solid waste and logging industry, the **Grizzly Solid Waste Grapple**.

This Grizzly Grapple includes the following:

- 1.) A flat tamping surface when the grapple is closed, which allows for a single attachment or grappling and compacting.
- 2.) A 52-inch jaw opening to allow removal of large objects from the waste stream.
- 3.) A head specialized to meet a customer’s stick linkage bolt pattern for their backhoe and/or excavator.
- 4.) Field-testing and proven dependability, with 20 years of design evolution based on real transfer station experience.
- 5.) A complete owner’s manual and same-day service and parts availability.

We have designed solid waste grapples to fit the following brand name backhoes and excavators;

Komatsu – Link Belt – J.I. Case – John Deere – Caterpillar

Our engineers work closely with the backhoe and excavator manufacturers to make sure the Grizzly Solid Waste Grapple precisely fits the customer’s machine.

Please consider this “bear” of a grapple when discussing materials-handling issues with your customers. Give us a call if you would like a list of customer reference or if you have any questions. We’re looking forward to sharing our experience with you!

Respectfully,

Jack T. Makinson
